EC 3354 - SIGNALS AND SYSTEMS

(Common to Electronics and Communication Engineering/Electronics and Telecommunication Engineering and Medical Electronics)

(Regulations 2021)

Time: Three hours

Maximum: 100 marks

Answer ALL questions.

PART A —  $(10 \times 2 = 20 \text{ marks})$ 

- 1. Define continuous and discrete time signals.
- 2. Distinguish between deterministic and random signals.
- 3. Write the pair equations of the Fourier series of a periodic continuous time signals.
- 4. Recall the initial and final value theorems of Laplace transform.
- 5. Define impulse response.
- 6. State the condition for an LTI system to be stable.
- 7. What is aliasing?
- 8. State any two properties of DTFT.
- 9. Differentiate between recursive and non-recursive systems.
- 10. List the condition for an LTI system to be causal.
